

Vyron Drew L. Galapin

Livermore, CA | 573-639-2765 | vdgalapin@gmail.com | [GitHub](#) | [LinkedIn](#)

Professional Summary

Systems-focused Software Developer and Warehouse Systems Coordinator with 4+ years of experience building and optimizing enterprise warehouse management systems in manufacturing environments. Skilled in full-stack development, SQL analytics, and operational systems integration used to improve inventory accuracy, material flow, and production visibility. Proven ability to translate warehouse and manufacturing requirements into scalable software solutions while coordinating cross-functional teams across operations, engineering, and IT.

Core Skills

- Warehouse Management Systems (WMS), Inventory Control and Cycle Counting, Supply Chain Analytics
- Process Improvement, Root Cause Analysis, Manufacturing Operations, Operational Reporting
- SQL (Advanced), Java, Python, JavaScript, HTML/CSS, TypeScript
- Spring Boot, Node.js, React, Flask
- Excel (Advanced), VBA Automation, Git, Docker, Linux, IBM AS400, DBeaver, Render, Supabase

Professional Experience

Warehouse Systems Coordinator — Dräxlmaier Group | Livermore, CA | 2025 – Present

- Lead system revisions and operational updates across warehouse and production systems.
- Investigate inventory discrepancies and cycle count variances using SQL data analysis.
- Develop Excel VBA automation tools to reduce manual reporting and improve visibility.
- Implement validation checks to maintain data integrity and prevent operational disruptions.
- Collaborate with engineering, IT, and operations teams to resolve system issues.
- Design inventory dashboards including ABC and FSN classification models.

Software Developer II – Warehouse Management Systems — Kawasaki Motors Manufacturing | Aug 2020 – Sep 2025

- Developed web and mobile WMS applications using LANSAS on IBM AS400 with HTML, CSS, Bootstrap, JavaScript, and TypeScript.
- Designed Wave Generation logic to optimize pick ticket grouping by equipment, location, and urgency.
- Implemented validation controls to ensure inventory pickability and prevent operational bottlenecks.
- Built SQL reporting tools to analyze inventory discrepancies and operational anomalies.
- Implemented authentication and secure user access across warehouse applications.
- Managed deployments across Development, Test, and Production environments.
- Collaborated with warehouse, quality, and production teams to translate operational needs into scalable system features.

Projects

- Coffee WebD – Built a café review platform using Flask backend, PostgreSQL database via Supabase, and responsive HTML/CSS/JavaScript frontend.
- Warehouse Management System (Spring Boot) – Built a simplified WMS prototype using Java Spring Boot and PostgreSQL with a web dashboard for inventory tracking.

Education

Bachelor of Science in Computer Science — Northwest Missouri State University (Cum Laude)
